Modular Forms and You

A talk by
Carl Erickson

Abstract

Do you wake up each day feeling overwhelmed by arithmetic data? Do your L -functions have a functional equation shaped holes that can't be left empty any longer? Are you getting tired of leaving those enormous symmetry groups just sitting around, doing nothing? Rankin at the bottom of the ladder?

Well what the heck are you waiting for? Modular forms will solve all your problems and lift you to the next level. You'll be fitter, happier, and even more popular.

How can you start finding out if modular forms are right for you? Come to our free, no-strings-attached, introductory seminar! We'll explain the most basic contexts in which modular forms arise and describe some things that they're useful for.
